

Floor molding

NEW

The perfect way, how to finish a new floor smoothly

- They cover the expansion joint easily
- Protects walls from damage or pollution
- They are available in the same colors and designs like floor tiles
- Easy and fast assembly with glue or screwing
- Product of Czech Republic

The accessories to which we are newly adding the floor molding is a necessary part of the floor not only from an aesthetic point of view. By using Fortelock floor moldings, you will achieve a complete floor appearance and at the same time you will not lose the functional specifics that make our PVC tiles stand out.

Floor moldings, as well as PVC tiles, can withstand high loads and protect walls from damage or pollution. Another plus is the smooth ending of the floor and easy covering of the expansion joint.

The suitability of using floor moldings is identical with the choice of the elected type of tiles. We recommend floor moldings especially for areas with high loads, such as industrial halls, storage and commercial spaces, car repair shops, garages, corridors, shops, etc.

You can choose from colors and designs from the standard offer of the INDUSTRY series (except ECO).
